

Manisha Vyas

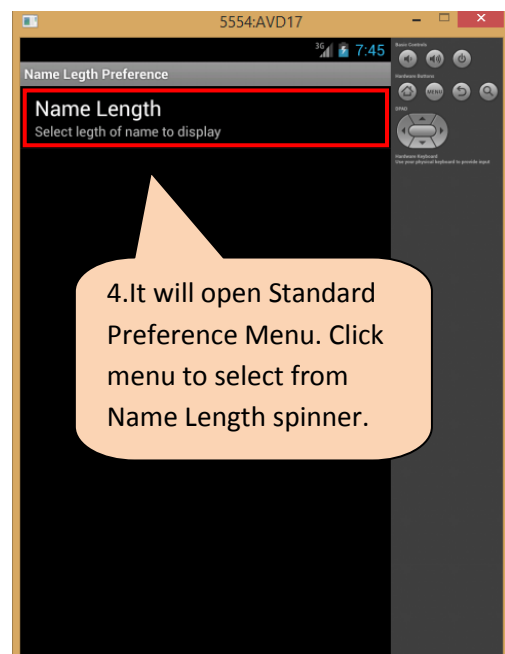

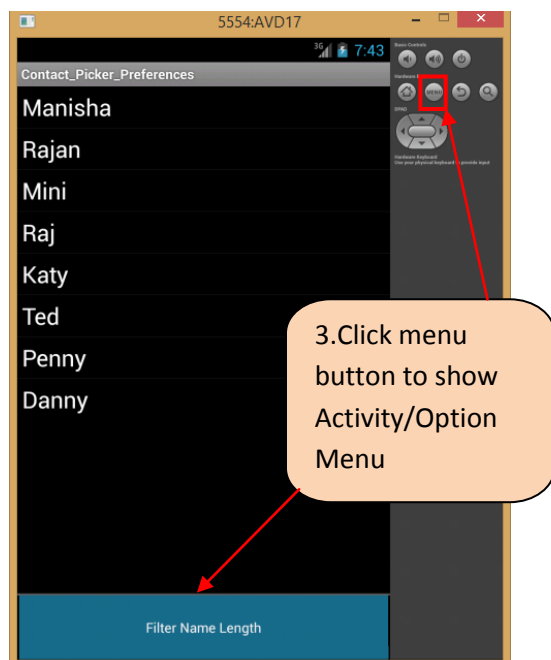

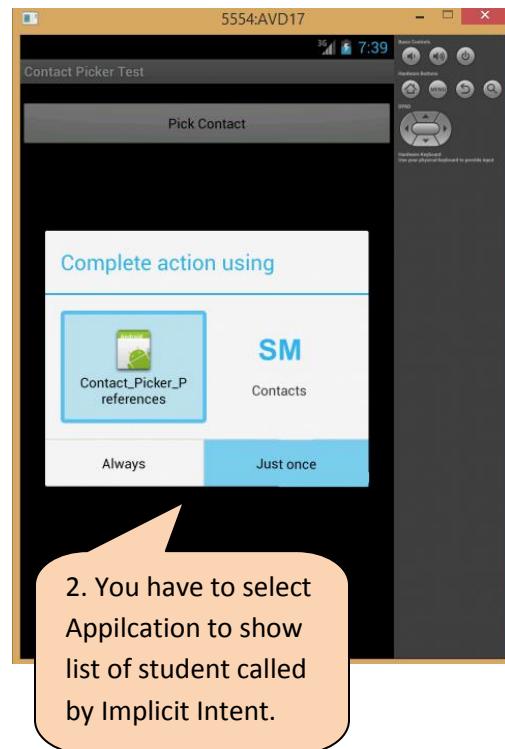

Question :

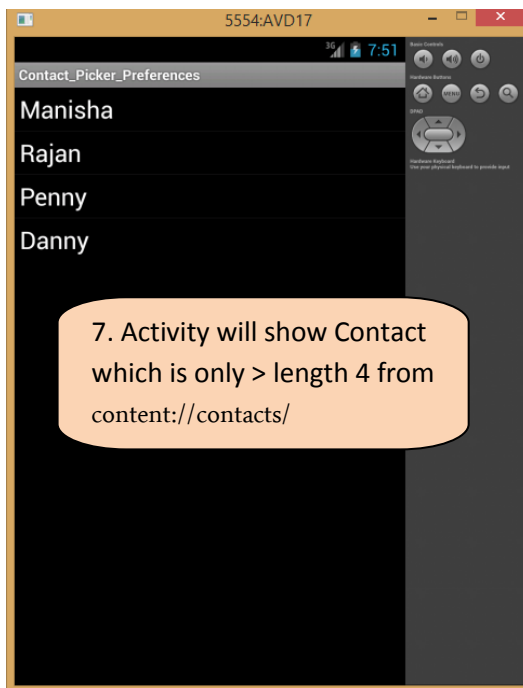

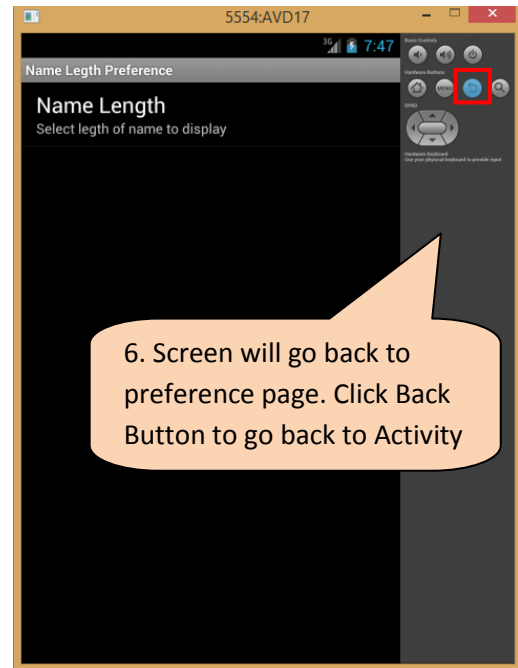

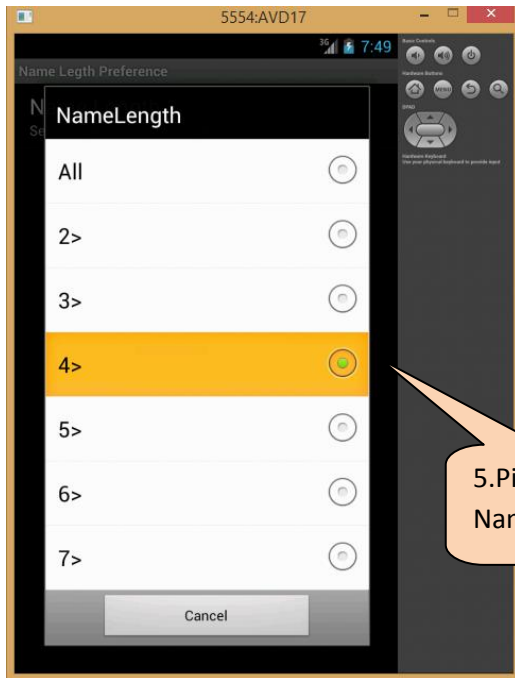

Please modify **Select a Contact** example discussed in the **Intent** chapter to provide a shared preference based on Standard Application Settings Framework .

The preference lets the users to display the contact names based on the length of the names. For example, only names longer than 5 characters are displayed.

We will be mainly working and modifying these Files

Step:1 Create res>xml> userpreference.xml

```
<?xml version="1.0" encoding="utf-8"?>
<PreferenceScreen
    xmlns:android="http://schemas.android.com/apk/res/android">

    <ListPreference
        android:key="PREF_NAME_LEN"
        android:title="Name Length"
        android:summary="Select Legth of name to display"
        android:entries="@array/name_length"
        android:entryValues="@array/name_length_val"
        android:dialogTitle="NameLength"
        android:defaultValue="5"
    />
</PreferenceScreen>
```

Step:2 Create array in res>values>arrays.xml

```
<?xml version="1.0" encoding="utf-8"?>
<resources>
    <string-array name="name_length">
        <item>All</item>
        <item>2</item>
        <item>3</item>
        <item>4</item>
        <item>5</item>
        <item>6</item>
        <item>7</item>
    </string-array>

    <string-array name="name_length_val">
        <item>1</item>
        <item>2</item>
        <item>3</item>
        <item>4</item>
        <item>5</item>
        <item>6</item>
        <item>7</item>
    </string-array>
</resources>
```

Step:3 Create array in res>layout>menu.xml

```
<?xml version="1.0" encoding="utf-8"?>
<menu xmlns:android="http://schemas.android.com/apk/res/android">

    <item android:id="@+id/filter_name"
        android:title="Filter Name Length" />

</menu>
```

Step:4 Create Preferences.java

```
//////////This load the userpreference.xml
package com.paad.contactpicker;

import android.content.SharedPreferences;
import android.os.Bundle;
import android.preference.PreferenceActivity;

public class Preferences extends PreferenceActivity {

    public static final String PREF_NAME_LEN = "PREF_NAME_LEN";

    SharedPreferences prefs;

    @Override
    public void onCreate(Bundle icle) {
        super.onCreate(icle);
        addPreferencesFromResource(R.xml.userpreferences);
    }
}
```

Dont forget to register this
PreferenceActivity in
[AndroidManifest.xml](#)

Step:5 Modify ContactPicker.java

```
package com.paad.contactpicker;

import java.util.ArrayList;

import android.app.Activity;
import android.content.Context;
import android.content.Intent;
import android.content.SharedPreferences;
import android.database.Cursor;
import android.net.Uri;
import android.os.Bundle;
import android.preference.PreferenceManager;
import android.provider.Contacts.People;
import android.provider.ContactsContract;
import android.view.Menu;
import android.view.MenuInflater;
import android.view.MenuItem;
import android.view.View;
import android.widget.AdapterView;
import android.widget.AdapterView.OnItemClickListener;
import android.widget.ArrayAdapter;
import android.widget.ListView;

public class ContactPicker extends Activity {

    int nameLength = 0;
    private static final int SHOW_PREFERENCES = 1;
```

```

        private static final int PICK_CONTACT = 2;
        final Context context = this;
        Cursor c;
        Uri data ;
        String dataPath ;

        @Override
        public void onCreate(Bundle icle) {
            super.onCreate(icle);
            setContentView(R.layout.main);

            Intent intent = getIntent();
            dataPath = intent.getData().toString();

updateFromPreferences();
        }
        @Override
        public boolean onCreateOptionsMenu(Menu menu)
        {
            MenuInflater menuInflater = getMenuInflater();
            menuInflater.inflate(R.layout.menu, menu);
            return true;
        }

        public boolean onOptionsItemSelected(MenuItem item) {
            super.onOptionsItemSelected(item);

            switch (item.getItemId())
            {
                case R.id.filter_name:
                    Intent i = new Intent(this, Preferences.class);
                    startActivityForResult(i, SHOW_PREFERENCES);
                    return true;

                default:
                    return super.onOptionsItemSelected(item);
            }
        }
        private void updateFromPreferences()
        {
            Context context = getApplicationContext();
            SharedPreferences prefs = PreferenceManager.getDefaultSharedPreferences(context);

            nameLength = Integer.parseInt(prefs.getString(Preferences.PREF_NAME_LEN, "0"));

            data = Uri.parse(dataPath + "people/");

            c = managedQuery(data, null, null, null, null);

            ///////////////////////////////////ONLY This much change in ContactPick.java Class////////////////////////////////////
            ///////////////////////////////////Which filters all name using Length //////////////////////////////////////
            ArrayList<String> newFrom = new ArrayList<String>() ;
            for( c.moveToFirst(); !c.isAfterLast(); c.moveToNext() )
            {

```

Create Option Menu to inflate Preference Menu menu.xml

OnOption Menu item selected Show the preference screen

This method Reloads Contacts from content://contacts/

Result of Preference Screen is modifying selection of NameLength Variable

```

        String name = c.getString(c.getColumnIndex
                                (ContactsContract.Contacts.DISPLAY_NAME));

        if(name.length() > nameLength)
        {
            newFrom.add(name);
        }
    }

    ArrayAdapter<String> adapter = new ArrayAdapter<String>
        (this, R.layout.listitemlayout, R.id.itemTextView, newFrom);

    ////////////////////////////////////////
    ListView lv = (ListView) findViewById(R.id.contactListView);
    lv.setAdapter(adapter);

    lv.setOnItemClickListener(new OnItemClickListener() {
        public void onItemClick(AdapterView<?> parent, View view, int pos, long id)
        {
            // Move the cursor to the selected item
            c.moveToPosition(pos);
            // Extract the row id.
            int rowId = c.getInt(c.getColumnIndexOrThrow("_id"));
            // Construct the result URI.
            Uri outURI = Uri.parse(data.toString() + rowId);
            Intent outData = new Intent();
            outData.setData(outURI);
            setResult(Activity.RESULT_OK, outData);
            finish();
        }
    });

    @Override
    public void onActivityResult(int requestCode, int resultCode, Intent data) {
        super.onActivityResult(requestCode, resultCode, data);

        switch (requestCode)
        {
            case (SHOW_PREFERENCES) :
            {
                updateFromPreferences();
                break;
            }
        }
    }
}

```

After returning back from preference screen update the Contact List.

No Chang in ContentPickerTester.java

```
package com.paad.contactpicker;

import android.app.Activity;
import android.content.Intent;
import android.database.Cursor;
import android.net.Uri;
import android.os.Bundle;
import android.provider.Contacts.People;
import android.view.View;
import android.view.View.OnClickListener;
import android.widget.Button;
import android.widget.TextView;

public class ContentPickerTester extends Activity {

    public static final int PICK_CONTACT = 1;

    @Override
    public void onCreate(Bundle icle) {
        super.onCreate(icle);
        setContentView(R.layout.contentpickertester);

        Button button = (Button)findViewById(R.id.pick_contact_button);

        button.setOnClickListener(new OnClickListener() {
            public void onClick(View _view) {
                Intent intent = new Intent(Intent.ACTION_PICK,
                    Uri.parse("content://contacts/"));
                startActivityForResult(intent, PICK_CONTACT);
            }
        });
    }

    @Override
    public void onActivityResult(int reqCode, int resCode, Intent data) {
        super.onActivityResult(reqCode, resCode, data);

        switch(reqCode) {
            case (PICK_CONTACT) : {
                if (resCode == Activity.RESULT_OK) {
                    Uri contactData = data.getData();
                    Cursor c = managedQuery(contactData, null, null, null, null);
                    c.moveToFirst();
                    String name = c.getString(c.getColumnIndexOrThrow(People.NAME));
                    TextView tv = (TextView)findViewById(R.id.selected_contact_textview);
                    tv.setText(name);
                }
                break;
            }
        }
    }
}
```

Step6: Register Preference Activity in Androidmanifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.paad.contactpicker"
    android:versionCode="1"
    android:versionName="1.0">
    <application android:icon="@drawable/icon" android:label="@string/app_name">
        <activity android:name=".ContactPicker"
            android:label="@string/app_name">
            <intent-filter>
                <action android:name="android.intent.action.PICK"></action>
                <category android:name="android.intent.category.DEFAULT"></category>
                <data android:path="contacts" android:scheme="content"></data>
            </intent-filter>
        </activity>
        <activity android:name=".ContentPickerTester"
            android:label="Contact Picker Test">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
        <activity android:name=".Preferences"
            android:label="Name Legth Preference">
        </activity>
    </application>
    <uses-sdk android:minSdkVersion="7" />
    <uses-permission android:name="android.permission.READ_CONTACTS"/>
</manifest>
```

Register Preference screen Activity
